## High-Pressure Triplex Plunger Pump — 110 kW

The product image on Page 1 showcases the Werner KD 716, a heavy-duty high-pressure plunger pump built for demanding industrial applications. Its robust cast housing, extended liquid end and precision-machined power-end components reflect the engineering strength synonymous with Werner Pumps.

### High-Pressure Triplex Plunger Pump 110 kW

- The Werner KD 716 series is a reciprocating triplex plunger pump, engineered for high-performance duty cycles in industrial and service-sector environments. Its design emphasises:
  - Minimum energy consumption
  - Exceptional mechanical efficiency
  - Low operational wear
  - Reliable continuous-duty performance
- Ideal for handling a wide range of fluids, including:
  - Thin, low-viscosity liquids
  - Pasty or abrasive media
  - Aggressive, neutral or chemically reactive substances
  - Hot water, recycled water, or toxic fluid streams
- The KD 716 is available in multiple configurations, each with tailored gearing and liquid-end structures:
  - KD 716 G Version A1: ≈ 325 kg
  - KD 716 G Version A2: ≈ 350 kg
  - KD 716 GK Version A3: ≈ 425 kg
  - KD 716 G Version B: ≈ 415 kg
  - KD 716 G Version C: ≈ 415 kg
  - KD 716 GK Version D: ≈ 410 kg

### Power ends and design

- Special crosshead sealing for extended life
- Power-end cooling where required by duty cycle
- Left- or right-hand drive compatibility
- Pressure lubrication system (dependent on version)

- High admissible radial load (available on request)
- Direction of rotation fully selectable
- Speed limitations vary with pressure stage by design
- Liquid End & Functional Components
  - Material and design tailored to liquid properties and operating conditions
  - Customisable configurations for aggressive or abrasive fluids
  - Full engineering specifications and dimensional data available on request

### Drive

- KD 716: Standard bareshaft pump (no integral gear)
- KD 716 G: Equipped with integrated gearbox
- KD 716 GS: Gearbox rotated 180° for specialised installations
- KD 716 H: Hydraulic drive mating flange (G and GS only)
- Optional: Crankshaft overload protection
- Suction and discharge ports are available on either side, simplifying installation and pipe routing.

### Liquid ends

- Version A1 / A2
  - Integral stuffing boxes
  - Suitable for clear, recycled and hot water duty
- Version C1
  - Stainless steel construction
  - Single stuffing box design
  - Optional suction valve release system for wear-free changeover
- All Versions
  - Compatible with high-duty industrial operations
  - Engineered for high structural stability and consistent pressure output

## Technical Data

## Technical Specifications

- Admissible radial load of drive shaft upon request
- Optional crankshaft overload protection
- Direction of rotation selectable
- Capacity and recommended motor ratings as mentioned apply water the average volumetric and mechanical efficiency are taken into consideration,
- Liquid end design depends on liquid handled and operation conditions
- Other operating data and detailed dimensions are available on request
- Speed imitation at different pressure stages is due to design
- The required suction pressure depends on application and pump design
- Suction and discharge connection are available on either side
